

Technical Data Sheet

Ultrasound scanner Minitube 3.0, for pregnancy detection in swine and small ruminants

This portable ultrasound scanner is specifically designed for transabdominal pregnancy detection in swine and small ruminants. It can also measure back fat in pigs, providing valuable insights into animal health and management. The device comes complete with a 3.5 MHz convex probe for accurate diagnostics. Additionally, the set includes an 8-inch tablet with a charger and a robust case, making it ideal for use in various field conditions.

The compact and lightweight device features a large display that provides a detailed view of the ultrasound image for clear and precise diagnostics. The improved picture quality enhances the accuracy of diagnoses, while the included freeze button on the ultrasound probe makes it easy to capture important images. Videos and images can also be recorded. The convex probe allows a larger area to be scanned, making it ideal for comprehensive examinations.

★ Product features

- Tablet size: 8.0"
- Display modes: B, B+B
- Image gray scale: 256 levels
- Measure functions: distance, area
- Detection depth: up to 240 mm
- Battery capacity: 2 hrs. continuous use
- Charger electrical connection: 100-240 V

☰ Scope of delivery

- Tablet 8" with shock protection
- 3.5 MHz electronic sector convex probe
- 2 replacement cables for the probe
- Carrying strap
- Power supply and USB cable
- Transport case
- Manual
